NO TRANSCANADA PIPELINE

QUICK FACTS

85% of Nebraskans get their drinking water from the Ogallala Aquifer. Neither TransCanada nor our government has a fail proof system for cleaning up tarsands—very different than traditional oil—from our land and water.

TransCanada got the majority of their steel on the Keystone 1 pipeline from India. Most steel for Keystone XL comes from India and Canada. It's only "coated" in the USA, not made in the USA.

TransCanada wants to pump almost 800,000 barrels per day of tarsands through the Niobrara, Platte, Verdigre Watershed and countless streams and across families' wells and water sources. The route still goes through the Ogallala Aquifer, the Sandhills and fragile soils more vulnerable to contamination and difficult to clean and remediate. Worse, this is an export pipeline headed to refinery owned by Saudi Arabia.

Tarsands emits at least three times more carbon than traditional crude oil. America needs a secure, clean energy plan, and tarsands is simply not in our national interest.

No company—especially not a foreign oil company—should be able to use eminent domain for their private gain, and that is exactly what TransCanada is doing to Nebraska landowners.

BOLDNEBRASKA.ORG/ACTIONS

Write a handwritten letter to President Obama. Go to PipelineFighters.org to tell us the day you are sending your letter, and submit a pic.

Send postcards to Pres. Obama and Sec. of State Kerrey featuring photos of Nebraska landowners in the path of Keystone XL: BoldNebraska.org/postcard

PRES. OBAMA White House, 1600 Pennsylvania Avenue NW, Washington, DC 20500
SEC. KERRY U.S. Department of State, 2201 C. Street NW, Washington, D.C. 20520

Pledge to Vote for New Energy at NEVoter.org. Status quo politicians, like Rep. Terry, support Big Oil. Let's use our power at the polls to vote for candidates who support solar, wind and biofuels and who believe in climate science.
